Calendar of Events:

May 23–27, 2022

Baylor Analysis Fest: From Operator Theory to Orthogonal Polynomials, Combinatorics, and Number Theory
Baylor University, Waco, TX, USA
<https://tinyurl.com/BAFconference>

May – November, 2022

Symmetries: Algebras and Physics
Thematic Semester, includes the following workshops:

May 23–June 10, 2022

Non-commutative algebras, representation theory and special functions

July 25–August 19, 2022

Graph theory, Algebraic combinatorics and mathematical physics

September 12–October 7, 2022

Integrable systems, exactly solvable models and algebras

Centre de Recherches Mathématiques, Montréal, Quebec, Canada
http://www.crm.umontreal.ca/2022/Symmetries22/index_e.php

June 13–17, 2022

OPSFA-16
Centre de Recherches Mathématiques, Montréal, Quebec, Canada
http://www.crm.umontreal.ca/2022/OPSFA22/index_e.php

July 3–8, 2022

Complex Analysis, Spectral Theory and Approximation meet in Linz
Johannes Kepler Universität, Linz, Austria
<https://www.jku.at/institut-fuer-analysis/konferenzen/complex-analysis/>

July 5–8, 2022

Functional Analysis, Approximation Theory and Numerical Analysis (FAATNA)
Matera, Italy

Topic #1 — OP – SF Net 29.3 — May 15, 2022

From: Benjamin Eichinger (benjamin.eichinger@tuwien.ac.at)
Subject: Announcement: Complex Analysis, Spectral Theory and Approximation meet in Linz

Dear colleagues!

The conference “Complex Analysis, Spectral Theory and Approximation meet in Linz” aims to bring together experts in Complex Analysis, Spectral Theory and Approximation and provide a framework for scientific exchange related to those topics. The event, which was initially planned in 2020 and postponed due to the Covid pandemic will eventually take place in a hybrid format through Johannes Kepler Universität, Linz.

Conference dates: July 3–8, 2022

Conference homepage: [link](#).

Registration Deadline for on-site participation: June 15

The conference program consists of invited talks and a poster session.

The list of plenary speakers is:

- Alexander Aptekarev
- Roman Bessonov
- Jacob Christiansen
- David Damanik
- Sergey Denisov

- Iryna Egorova
- Alexandre Eremenko
- Jake Fillman
- Fritz Gesztesy
- Alexander Kheifets
- Aleksey Kostenko
- Stanislas Kupin
- Milivoje Lukic
- Barry Simon
- Mikhail Sodin
- Gerald Teschl
- Sergey Tikhonov
- Alexander Volberg
- Harald Woracek

Sincerely, Benjamin Eichinger

Topic #2 — OP – SF Net 29.3 — May 15, 2022

From: Sergei Suslov (sergei@asu.edu)

Subject: Announcement: Article on the History of the Relativistic Schrödinger Equation

Article:

Discovery of the Relativistic Schrödinger equation

by Kamal Barley, José Vega-Guzmán, Andreas Ruffing, and Sergei K. Suslov

Journal:

Physics-Uspekhi, IOP Publishing, January 2022, Volume 65, Number 1, Pages 90–103

Abstract:

We discuss the discovery of the relativistic wave equation for a spin-zero charged particle in the Coulomb field by Erwin Schrödinger (presumably during the Christmas holidays 1925–26). However, in this new approach, an essential discrepancy was found with the fine structure formula for the energy levels already obtained by Sommerfeld in the framework of the ‘old’ quantum mechanics. As a result, Schrödinger had to withdraw the original ‘relativistically framed’ article, a draft of which has never been found, from a journal and start all over with his centennial article on the nonrelativistic stationary Schrödinger equation. Our goal here is to follow the original ‘relativistic idea’ from a modern mathematical viewpoint and elaborate on why Schrödinger didn’t publish it. We hope that this consideration will encourage the readers to study quantum physics starting from one of the crucial moments of its creation.

Contents:

1. Introduction
2. Introducing the relativistic Schrödinger equation
3. Solving the relativistic Schrödinger equation
4. Further treatment: nonrelativistic approximation
5. Semiclassical approximation: Wentzel–Kramers–Brillouin method for Coulomb fields

6. Erwin Schrödinger – 60 years later
7. Appendices
 - Summary of Nikiforov–Uvarov method
 - Evaluation of the integral
 - Laplace method
 - Letter from Schrödinger to Weyl
8. Acknowledgments
9. References

Goal:

We hope that this consideration, despite potential imperfections, will encourage the readers to study quantum physics starting at one of the crucial moments of its creation and draw their own conclusions.

This article has appeared on the IOP website:

among others.

Topic #3 — OP – SF Net 29.3 — May 15, 2022

From: OP–SF Net Editors

Subject: Book Description for: *Theta functions, elliptic functions and π* (2020) by **Heng Huat Chan**

It may be of interest to some members of the OPSFA mailing list to know about the following recently published book:

“Theta functions, elliptic functions and π ”, in the **De Gruyter Textbook** series:

<https://doi.org/10.1515/9783110541915>.

Heng Huat Chan, Department of Mathematics, National University of Singapore, Singapore, Republic of Singapore

This book presents several results on elliptic functions and π , using Jacobi’s triple product identity as a tool to show surprising connections between different topics within number theory such as theta functions, Eisenstein series, the Dedekind delta function, and Ramanujan’s work on π . The included exercises make it ideal for both classroom use and self-study.

- A pedagogical presentation of elliptic functions, modular forms and Ramanujan’s work on π .
- Connects several parts of number theory through Jacobi’s triple product identity.
- Includes exercises, making it also suitable for self-study.

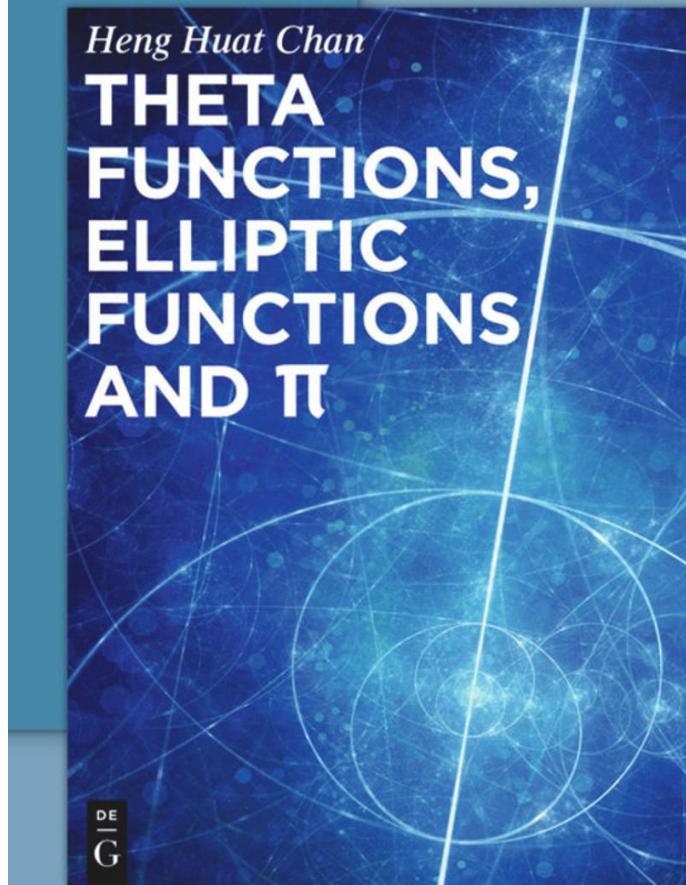

Figure 1: Book cover

elegant proof!" or "What an interesting problem!" (and, indeed, there are many challenging exercises). Read with enjoyment!

The following is the table of contents.

Table of Contents:

Foreword	ix
Introduction	xi
Acknowledgments	xv
Chapter 1. An introduction to Jacobi's triple product identity	1
1.1. Cauchy's generalization of the binomial theorem	1
1.2. Jacobi's triple product identity	4
1.3. Two identities of Euler	6
1.4. Andrews' proof of Jacobi's triple product identity	9
1.5. Jacobi's triple product identity and the proof of the quintuple product identity	10
Chapter 2. Jacobi's theta functions of one variable and the triple product identity	15
2.1. Jacobi's theta functions of one variable	15
2.2. Identities associated with Jacobi's theta functions of one variable	16
2.3. Jacobi's triple product identity revisited	18
2.4. A Fermat-type equation and Jacobi's theta functions	21
2.5. A quotient of Jacobi's theta functions	23
Chapter 3. Two-variable extensions of Jacobi's theta functions and the partition function	29

The following is the foreword written by **Bruce Berndt**, reprinted with permission.

When one peruses the offerings of mathematics book publishers, one finds a large variety of text books at the undergraduate level, and also at the advanced level for upper-level graduate students and researchers. However, few books are "in between." Theta functions, elliptic functions and π falls "in between." This book, focusing on certain classical topics related to number theory, provides a stepping stone to both the past and future. The topics are chosen both for their elegance and their usefulness. The ubiquitous theta functions play the leading role. They form relationships to elliptic functions, sums of squares, partitions, hypergeometric functions, q -series, and infinite series representations for $1/\pi$. This book is valuable, because some of its topics do not appear in any of the courses taught by large, major universities. But it is even more valuable because it is inspirational. As you read it, you will exclaim, "What a beautiful theorem!" or "What an

3.1. Two-variable extensions of Jacobi's theta functions	29
3.2. An important identity of Jacobi	30
3.3. The partition function $p(n)$ and its generating function	31
3.4. The values of $p(n)$	33
3.5. Ramanujan's congruences for $p(n)$	35
Chapter 4. Ramanujan's differential equations	15
4.1. The Bernoulli numbers and $\cot u$	41
4.2. The logarithmic derivative of $\vartheta_1(u \tau)$	42
4.3. Ramanujan's differential equations for $L_2(x)$, $L_4(x)$ and $L_6(x)$	44
Chapter 5. Elliptic functions and Jacobi's triple product identity	53
5.1. Elliptic functions	53
5.2. Transformation formulas associated with Jacobi's theta functions	54
5.3. Proof of a fundamental identity of Jacobi associated with $\vartheta_1(0 \tau)$	55
5.4. Proof of the Jacobi triple product identity using theory of elliptic functions	59
Chapter 6. Two elliptic functions and their properties	63
6.1. Weierstrass' \wp function	63
6.2. A differential equation satisfied by Weierstrass' \wp function	64
6.3. An elliptic function $J(u \tau)$ associated with $\vartheta_1(u \tau)$	65
6.4. Weierstrass' \wp functions and an elliptic function associated with $\vartheta_1(u \tau)$	66
6.5. Transformation formula satisfied by Dedekind's function $\Delta(\tau)$	67
Chapter 7. An elliptic function of Jacobi	75
7.1. An elliptic function of Jacobi	75
7.2. A differential equation satisfied by $S(u \tau)$	76
7.3. The first few terms in the series expansion of $S(u \tau)$	80
7.4. Representations of Eisenstein series $E_4(\tau)$ and $E_6(\tau)$ in terms of $\vartheta_3(0 \tau)$ and λ	81
Chapter 8. Hypergeometric series and Ramanujan's series $1/\pi$	87
8.1. Ramanujan's differential equations and Lagrange's four-square theorem	87
8.2. Hypergeometric series and a differential equation satisfied by $\vartheta_3(0 \tau)$ and λ	90
8.3. Hypergeometric series and π	96
8.4. Ramanujan's series for $1/\pi$	97
Chapter 9. The Gauss–Brent–Salamin algorithm for π	103
9.1. Gauss' arithmetic–geometric mean	103
9.2. Gauss' AGM, Jacobi's theta functions and hypergeometric series	105
9.3. The Gauss–Brent–Salamin algorithm for π	108
Index	117
Bibliography	119

The following topic is dedicated to two the AMS [Mathematical Reviews](#) and [zbMATH Open](#) reviews for this book.

Topic #4 — OP – SF Net 29.3 — May 15, 2022

From: OP-SF Net Editors

Subject: Book Reviews for: *Theta functions, elliptic functions and π* (2020) by Heng Huat Chan

The following are reviews of the book *Theta functions, elliptic functions and π* (with a foreword by Bruce Berndt) by Heng Huat Chan, National University of Singapore, Singapore & National Changhua University of Education, Taiwan. It was published by De Gruyter, Berlin in 2020.

This book review by Daniele Ritelli was originally published by the [American Mathematical Society](#) (AMS) as the review [MR42028036](#) in *Mathematical Reviews/MathSciNet*. It is reprinted here by permission of the AMS.

The main objective of this textbook is to provide an accessible introduction to the Theta functions, which constitute a fundamental chapter in the theory of elliptic functions and, more generally, of special functions, usually mastered by specialists in the field and this is evidenced by the fact that the reference texts in this field are starting from the classic and monumental manual of Whittaker and Watson's *A Course of Modern Analysis* of which it is worth mentioning the recent republication [[MR4286926](#)], *Pi and the AGM* of the Borwein brothers [[MR1641658](#)] and finally the monograph *Ramanujan's theta functions* [[MR3675178](#)] of Shaun Cooper are, inevitably, extremely specialized level. On the other hand, the author proposes to approach these topics, quote from the introduction, by bridging, preparing the reader by gradually introducing him to hypergeometric series, theta functions, elliptic functions and modular forms.

My opinion is that the aim of the text is fully successful, allowing the reader to appreciate the many identities presented in the text, starting with Ramanujan's famous series for $1/\pi$, and at the same time to continue his or her journey by approaching the aforementioned specialised texts.

This book review by Franz Lemmermeyer was originally published by [zbMATH Open](#) as the review [an:1458.11002](#) which is available under the [CC BY-SA 4.0 license](#).

This book covers contributions by Euler, Jacobi, Eisenstein, Gauss and Ramanujan: Euler's special case of the q -binomial theorem, Jacobi's triple product formula, Jacobi's theta functions, Jacobi elliptic functions, Eisenstein series, Ramanujan's series for $\frac{1}{\pi}$, and Gauss's theory of the arithmetic-geometric mean. The choice of topics is guided by the aim of making the book *J. M. Borwein and P. B. Borwein [Pi and the AGM. A study in analytic number theory and computational complexity. New York, NY: John Wiley (1987; [Zbl 0611.10001](#))]* accessible to students familiar with basic complex analysis. The present book is similar in spirit to M. D. Hirschhorn's equally charming [*The power of q . A personal journey*. Cham: Springer (2017; [Zbl 1456.11001](#))] – I highly recommend both books.

Topic #5 — OP – SF Net 29.3 — May 15, 2022

From: OP-SF Net Editors
Subject: Preprints in arXiv.org

The following preprints related to the fields of orthogonal polynomials and special functions were posted or cross-listed to one of the subcategories of arXiv.org during March and April 2022. This list has been separated into two categories.

OP-SF Net Subscriber E-Prints

Topic #6 — OP – SF Net 29.3 — May 15, 2022

From: OP–SF Net Editors

Subject: Submitting contributions to OP–SF NET and SIAM–OPSF (OP–SF Talk)

To contribute a news item to OP–SF NET, send e-mail to one of the OP–SF Editors
howard.cohl@nist.gov, or [spostData@hawaii.edu](mailto:spost@hawaii.edu).

Contributions to OP–SF NET 29.4 should be sent by July 1, 2022.

OP–SF NET is the electronic newsletter of the SIAM Activity Group on Special Functions and Orthogonal Polynomials (SIAG/OPSF). We disseminate your contributions on anything of interest to the special functions and orthogonal polynomials community. This includes announcements of conferences, forthcoming books, new software, electronic archives, research questions, and job openings as well as news about new appointments, promotions, research visitors, awards and prizes. OP–SF Net is transmitted periodically through a post to OP–SF Talk which is currently managed and

moderated by Howard Cohl (howard.cohl@nist.gov). Anyone wishing to be included in the mailing list (SIAG/OPSF members and non-members alike) should send an email expressing interest to him. Bonita Saunders also posts the Newsletter through SIAM Engage (SIAG/OPSF) which is received by all SIAG/OPSF members.

OP-SF Talk is a listserv associated with SIAG/OPSF which facilitates communication among members, non-members and friends of the Activity Group. To post an item to the listserv, send e-mail to howard.cohl@nist.gov.

WWW home page of this Activity Group:

<http://math.nist.gov/opsf>

Information on joining SIAM and this activity group: service@siam.org

The elected Officers of the Activity Group (2020–2022) are:

Peter Alan Clarkson, Chair

Luc Vinet, Vice Chair

Andrei Martínez-Finkelshtein, Program Director

Teresa E. Pérez, Secretary and SIAM Engage (SIAG/OPSF) moderator

The appointed officers are:

Howard Cohl, OP-SF NET co-editor

Sarah Post, OP-SF NET co-editor

Bonita Saunders, Webmaster and SIAM Engage (SIAG/OPSF) moderator

Topic #7 —— OP – SF Net 29.3 —— May 15, 2022

From: OP-SF Net Editors

Subject: Thought of the Month by **Vladimir Arnold**

“Not even mentioning the relative character of initial axioms, one cannot forget about the inevitability of logical mistakes in long arguments (say, in the form of a computer breakdown caused by cosmic rays or quantum oscillations). Every working mathematician knows that if one does not control oneself (best of all by examples), then after some ten pages half of all the signs in formulae will be wrong and twos will find their way from denominators into numerators. ”

Vladimir Arnold (1937–2010), in *On teaching mathematics*, Uspekhi Mat. Nauk **53** (1998), no. 1, 229–234; English translation: Russian Math. Surveys **53** (1998), no. 1, 229–236.

Contributed by Daniel Lichtbau
